# Custom Suit Instruction Sheet

(For informational purposes only - Do NOT fax with order)

1) Coat Size/Chest

This measurement is to measure the size of your coat. If you already know that you are a 46 long, please let us know. Regardless, please still take this exact measurement because it helps to make the suit a more exact fit.

**Instructions:**

Place a tape measure around the broadest part of your chest, over the top of the nipples and high on your back. Slip a finger inside the tape measure for a little extra room. This measurement is your coat size/chest.

2) Sleeve Length

**Instructions:**

Place the tape measure at the center seam in the back of the coat and run the tape over the center section of the shoulder and down the outside of the sleeve keeping your arm as straight as possible. Whatever the measurement is, record it as your sleeve length.

3) Waist

**Instructions:**

Use a pair of pants that fit you well. Attach snap and zipper and then straighten pants. Extend the tape measure over the pants and between your two fingers and then double to obtain the final measurement.

4) Stomach

**Instructions:**

This measurement is taken directly over the navel. Wrap the tape around your body attempting to keep the tape as level as possible all the way around. Slip a finger in for a little extra space. Record the number where the tape overlaps as the stomach measurement. This number helps to determine if the suit should have an athletic cut, a portly fit, or a straight fit.

5) Thigh (optional)

This measurement only needs to be taken if you have excessively large legs. This will allow a more comfortable fit and ensure that the pleats of your pants will lay nicely.

**Instructions:**

Take the tape measure around the thickest part of your thigh and record the number where the tape overlaps. 7) Biceps (optional)\_\_\_\_\_

While this measurement is rarely required, it would be helpful if you have extremely large arms (i.e. a weight lifter) in order to ensure a proper sleeve fit.

**Instructions:**

Wrap the tape around the widest portion of your un-flexed arm and record the measurement where the tape overlaps.

6) Color\_\_\_\_\_

Please call for availability of color in your fabric style.
